EML Moving in December 2018

The EML is moving to the basement of **Barker Hall** in early **December** (*just a couple months away!*).

Construction is anticipated to finish during the first week of December. As the end of construction nears, we will update you with hard closure dates. Following the completion of construction, we can begin doing the final testing of our new microscope rooms to ensure they are free of electro-magnetic and acoustic interference (as much as possible).

We will be **CLOSED**

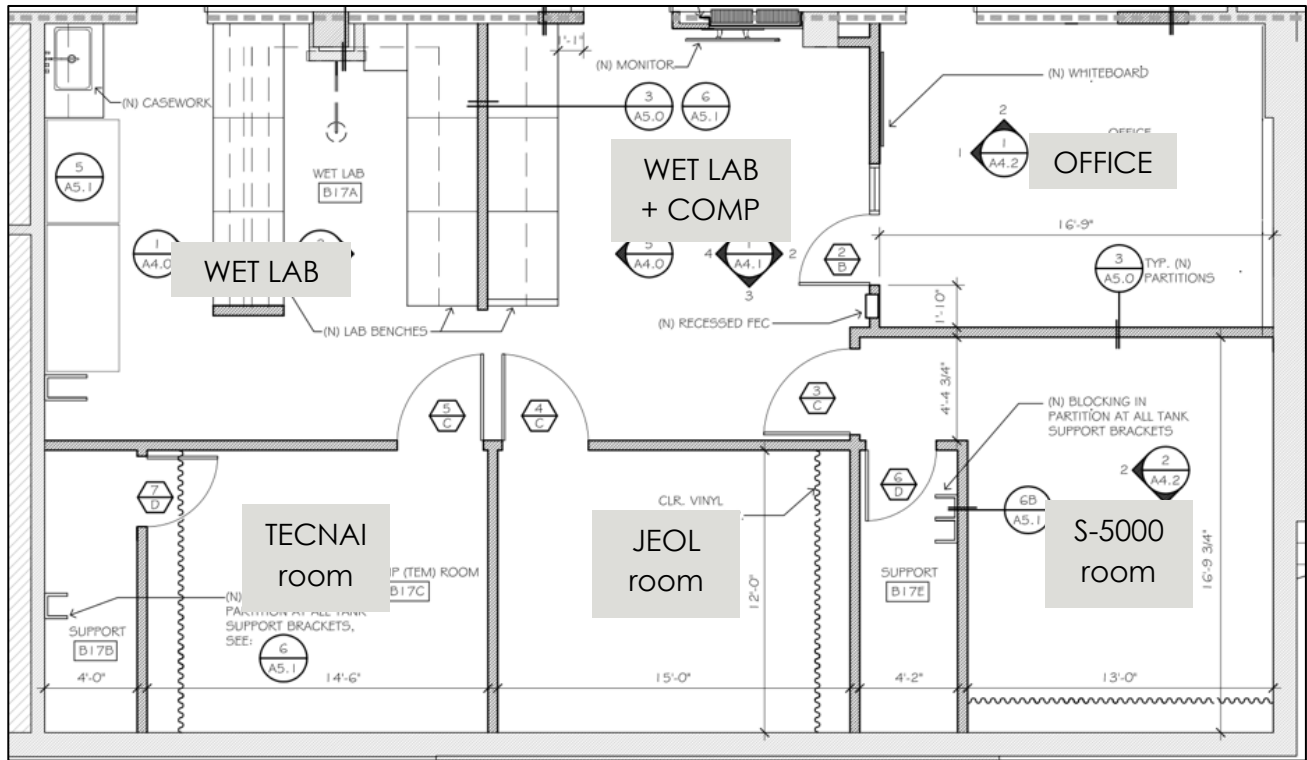

all DECEMBER → early JANUARY

The site testing will take a day or two, then we can begin disassembling and moving all of our instruments as well as the rest of our lab. Our aim is to stagger our instrument move such that we can bring high-use instruments back up online quickly. The goal is to be back open again in the first or second week of **January 2019**.

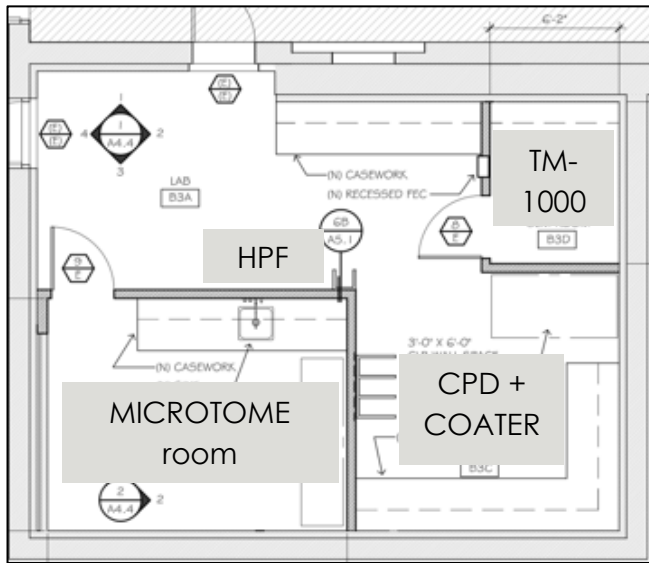

We are looking forward to our new remodeled space and we'll update our website soon with notices of where our new location will be. For now, please take a look at the info below.

Happy Imaging!
EML Staff

New Location: Room 17 of Barker Hall

Above: Barker Hall Room 17 layout. Main EML suite w/ office, wet lab, & 3 microscope rooms

Left: Barker Hall Room 3 layout. Separate EML ancillary equipment room w/ HPF, microtomes, coaters, & tabletop SEM.

Below: New Location of EML, will be open in January 2019. <https://goo.gl/maps/4Q9LxK3DXWE2>
